

EXECUTIVE POC PROPOSAL

EdWin AI for AI Infra Ops

Next-Generation AIOps Platform for Unified Hybrid Observability
and Autonomous Remediation

Q2 2026 | Strategic Infrastructure Initiative

| EXECUTIVE SUMMARY

The Challenge

Modern hybrid infrastructure has outpaced human oversight. Siloed tools like SolarWinds and Splunk generate 10k+ alerts daily, leading to catastrophic alert fatigue and prolonged MTTR.

The Solution

EdWin AI: An Agentic AIOps platform that unifies observability data, correlates cross-domain events, and automates remediation across on-prem and multi-cloud environments.

Goal: Transform IT operations from reactive crisis management to proactive autonomous resilience.

CRITICAL OPERATIONAL CHALLENGES

Alert Fatigue

90% of alerts are non-actionable noise, masking critical failures and burning out operational teams.

Tool Silos

Observability data is fragmented across 8+ tools, making end-to-end visibility nearly impossible.

High MTTR

Root cause analysis (RCA) takes hours or days due to manual correlation and "war room" triage cultures.

CURRENT MONITORING ECOSYSTEM

SolarWinds (Infra)

IBM Instana (APM)

Prometheus (K8s)

Grafana (Vis)

Splunk (Logs)

ServiceNow (ITSM)

Oracle OEM (DB)

Azure Monitor

Problem: Data exists, but Intelligence is missing.

| THE AIOPS VISION

-  **Unified Observability:** A single pane of glass for all metrics, logs, and traces.
-  **AI Correlation:** Stitched alerts into logical incidents using ML.
-  **Predictive Analytics:** Detecting anomalies before service impact.
-  **Autonomous Remediation:** Self-healing infrastructure via automated runbooks.
-  **Capacity Optimization:** ML-driven forecasting for hybrid workloads.
-  **Conversational Ops:** AI Copilot for rapid incident investigation.

INTRODUCING EDWIN AI

Platform Intelligence

EdWin AI is an Agentic AIOps platform built on Amazon Bedrock. It doesn't just monitor—it acts. By leveraging a unified ITOps Knowledge Graph, it understands the complex relationships between your applications and global infrastructure.

Core Pillars:

- Agentic Investigation
- Dynamic RCA Discovery
- Cross-Domain Synthesis

EdWin AI Platform Architecture

CAPABILITY MATRIX

Core Capability	Feature Highlight	Operational Impact
Event Intelligence	Deduplication & Cross-tool Correlation	80% Noise Reduction
Root Cause Analysis	Automated RCA Doc Generation	Eliminates manual investigation
Predictive Analytics	Dynamic Baseline Anomaly Detection	Prevents 35% of Major Incidents
Remediation	Autonomous Runbook Execution	Reduces manual effort by 40%
AI Copilot	Natural Language Troubleshooting	Democratizes incident response

| POC SCOPE & BOUNDARIES

Target Environment

- ✓ **Applications:** 3 Mission-Critical Services (ERP, Customer Portal, Data API)
- ✓ **Infra:** 250 VM Instances (On-Prem + Azure)
- ✓ **Database:** Oracle & SQL Server Clusters

Integrations

- ✓ SolarWinds & Azure Monitor
- ✓ Splunk (Log Ingestion)
- ✓ ServiceNow (Bi-directional Sync)

CURRENT STATE: FRAGMENTED SILOS

The Complexity Debt

Data is trapped in domain-specific tools. Alerting is decentralized, leading to:

- Delayed cross-domain correlation
- Conflicting data interpretations
- Massive overhead in tool maintenance

FUTURE STATE: UNIFIED AIOPS

The EdWin AI Advantage

A centralized SaaS platform that ingests telemetry from all domain tools. Specialized AI agents perform real-time triage and remediation, feeding directly back into ServiceNow for complete governance.

Intelligence Layer: LLM-driven correlation and Knowledge Graph relationship mapping.

ENTERPRISE SECURITY & TRUST

Data Security

AES-256 Encryption (Rest/Transit).
PII masking at ingestion layer.

Governance

Granular RBAC, SSO Integration,
and Full Audit Logging for every AI
action.

Compliance

SOC2 Type II, HIPAA, and GDPR
compliant SaaS hosting
environment.

Provide Accurate
and Clear Notice
Regarding Data
Governance
Policies

Perform Due
Diligence

| INTEGRATION STRATEGY

API-First Approach

Direct REST/Webhook integrations with SolarWinds, Azure Monitor, and Instana for sub-second telemetry sync.

Streaming Telemetry

Direct log and event streaming from Splunk and Prometheus to the EdWin Event Lake for ML processing.

3,000+ Pre-built connectors ensure deployment in <1 hour.

POC IMPLEMENTATION ROADMAP

| POC SUCCESS KPIS

90%

Noise Reduction

60%

MTTR Improvement

75%

RCA Accuracy

Transforming "Mean Time to Resolve" into "Mean Time to Prevent".

USE CASE #1: INTELLIGENT CORRELATION

 Alert Correlation Dashboard

Scenario: A flapping switch triggers 500 alerts in SolarWinds, while Splunk shows database connection timeouts.

EdWin AI Action: Automatically groups 500+ alerts into a single 'Network Outage' incident, identifies the exact switch port failure, and suppresses downstream app alerts.

Result: 1 Incident Ticket instead of 500. MTTR reduced from 120m to 8m.

USE CASE #2: PREDICTIVE CAPACITY

Scenario: Historical trend shows storage on Azure Database will hit 95% threshold during month-end processing.

AI Action: Predicts saturation 72 hours in advance. Generates a 'Right-sizing' recommendation and requests auto-expansion via ITSM.

| USE CASE #3: AUTOMATED SELF-HEALING

The Self-Healing Workflow

- 1 **Detect:** AI detects abnormal CPU spikes in Web Cluster.
- 2 **Analyze:** Correlation identifies a runaway thread in a specific pod.
- 3 **Remediate:** EdWin executes a restart runbook automatically.
- 4 **Verify:** AI validates performance returns to baseline.

ZERO HUMAN INTERVENTION

COMPETITIVE LANDSCAPE

Feature	EdWin AI	Dynatrace	Splunk ITSI	BigPanda
AI Agentic Reasoning	High (Bedrock)	Moderate	Low	Moderate
Tool Integrations	3,000+	600+	400+	800+
Deployment Time	1 Day	Weeks	Months	Weeks
ServiceNow Sync	Bi-directional	Partial	Add-on	Standard

BUSINESS OUTCOMES & ROI

Uptime

Improved SLA compliance by 25%.

Agility

Teams focus on innovation, not fire-fighting.

Cost

Avoided major outage costs (\$500k/hr avg).

RISK MANAGEMENT

Integration Complexity

Mitigation: Use EdWin's out-of-the-box native connectors; no custom coding required.

Data Quality

Mitigation: Automated data hygiene and normalization layer within the EdWin ingestion engine.

| ACTION PLAN

-  **Step 1:** Formal Approval of the POC Proposal.
-  **Step 2:** Designate POC Team Leads (IT Ops & Cloud).
-  **Step 3:** Grant secure read-access to monitoring tool APIs.
-  **Step 4:** Kickoff Workshop - Monday Week 1.

"Let's move from Reactive Chaos to Autonomous Intelligence."

| APPENDIX

Acronyms

- **AIOps**: Artificial Intelligence for IT Operations
- **RCA**: Root Cause Analysis
- **MTTR**: Mean Time to Repair
- **SLO/SLA**: Service Level Objectives/Agreements

Technical Refs

- Amazon Bedrock LLM Framework
- OpenTelemetry (OTEL) Support
- Agentic Triage Logic (ATL 2.0)
