

Infra Architect

Objective

Infra Arch Design Support Infra Support Cost Estimation Infra Resource Allocation	▪ Deliver a high-level architecture informed by APAC infrastructure knowledge to streamline and support follow-on processes, including the TSA review. ▪ Upfront infrastructure cost alignment minimizes mid-term budget adjustments, improving planning accuracy and project execution efficiency. ▪ Proactively planning and securing infrastructure resources for application initiatives ensures stability, reduces execution risk, and improves delivery efficiency across the portfolio.
Infra Operational Process	▪ Standardized architecture blueprints (standard Infra design, TSA review) ▪ Observability uplift: unified monitoring, logging, APM dashboards. ▪ Capacity & performance modelling for upcoming growth ▪ Automation enablement to reduce manual provisioning ▪ Infrastructure Support Handbook covering essential application engagement guidelines.

Major Deliveries

Infrastructure Duplicate Systems Rationalization	▪ Duplicate platform analysis and functional dependency mapping. ▪ Rationalization decisions: Retire, Consolidate, Standardize. ▪ Business case & impact report (licensing reduction, DC footprint, support simplification).
Cloud Candidate Assessment (providing supporting inputs, with primary ownership led by the Cloud Solutions team)	▪ Workload profiling & risk classification (latency, data sensitivity, regulatory constraints). ▪ Cloud suitability scoring using Rehost, Replatform, Refactor, Retire, Retain, or Repurchase (SaaS). ▪ Landing zone alignment: identity, network, security, DR patterns. ▪ TCO comparison & migration wave plan with compliance-aligned roadmap.
Major Tech Refresh Solution Review	▪ Remediation pathways: upgrade, side-by-side migration, move-to-PaaS, or retire.
Global BizTech APAC Representation	▪ Ensures APAC business and technology priorities are accurately represented in global decision-making, enabling better alignment and reducing strategy-execution gaps.

Success Metrics (KPIs)

- % of duplicate systems eliminated
- % workloads migrated to cloud
- % EOS systems remediated before deadline
- Infra cost reduction (%)
- Deployment time reduction (via automation)
