About LogicMonitor

- Founded in 2007
 - 1000+ employees
 - 2024 Inc. 5000 – one of America's fastest growing private companies
- Singapore/ANZ/US/EMEA Instance in AWS
 - Monitoring over 4 million devices and analyzing over 2 trillion metrics per day
 - Gartner® Magic Quadrant™ for Observability Platforms, 2024 & 2025
- \$800 million investment led by Vista Equity Partners, including KKR, PSG, Golub Capital and others, attaining a \$2.4 billion valuation

PRESS RELEASE

The Era of Reactive Observability Is Over: LogicMonitor Acquires Catchpoint

LogicMonitor creates the first AI-powered platform for connected digital operations, taking direct aim at downtime, tool sprawl, and reactive IT

SANTA BARBARA, Calif. and LAS VEGAS, Nev. – Dec. 2, 2025 – LogicMonitor, the AI-first hybrid observability platform powering the next generation of digital infrastructure, today announced it has completed its acquisition of Catchpoint, a leader in Internet Performance and Digital Experience Monitoring. Together, LogicMonitor and Catchpoint are redefining how modern businesses run, ending downtime and eliminating blind spots across the backbone of today's connected world.

Why This Matters

For years, observability has been reactive. Teams watched problems instead of preventing them. LogicMonitor and Catchpoint just changed the game. By combining LogicMonitor's deep infrastructure and AI expertise with Catchpoint's Internet-level intelligence, the new LogicMonitor platform delivers predictive visibility and control across cloud, code, and the Internet itself. The goal is simple: stop chasing alerts and start staying ahead of them.

Catchpoint named a Leader for the second year in a row!

in the Gartner® Magic Quadrant™
for Digital Experience Monitoring (DEM)

Gartner, Magic Quadrant for Digital Experience Monitoring, October, 2025

Visibility in a Single Pane

End-to-End Infrastructure Monitoring. One Platform.

Servers & OS Monitoring:

Windows, Linux, Unix,
VMware, Hyper-V

Networking Gear:

Routers, switches, firewalls,
software defined
networking

AWS, Azure and GCP (OCI coming!):

Cost & Usage Reports (CCO)

WiFi Access Points:

Meraki, Aruba, Juniper

IoT & Protocol Support:

e.g. SNMP, API, Logs

Unified Observability - without blind spots

Together, LogicMonitor and Catchpoint deliver the visibility, intelligence, and foresight required to prevent outages, optimize performance, and accelerate innovation.

The LogicMonitor difference

Complex IT environments require a unified platform

Best-in-class coverage with 3000+ OOTB integrations

Proactive platform for unparalleled time-to-value

Rich, broad, and deep dataset for Agentic AI

Single pane of glass with full context and integrated workflows

Actionable insights tied to business outcomes

Simple, Secure, and Scalable Deployment

Low Maintenance by Design – Agentless, Cloud-Native,
Enterprise-Ready

🔍 Agentless Monitoring
Deploy instantly – no endpoint software required.

🌐 Singapore Hosting
Low-latency, in-region data to meet compliance needs.

♻️ Zero-Upgrade Overhead
SaaS delivery means automatic updates with no downtime.

The screenshot displays the LogicMonitor web interface. At the top, a browser tab shows the URL https://ocsystems.dowts.ai/inspectorcard/insights/correlation_6a389538-726e-4d44-9c1d-d626c48475ed3716899110243. The main header indicates an incident: "Incident: SDWAN tunnel flapping and outage impacting business services". Below this, the interface is divided into several sections:

- Summary:** Multiple alerts in multiple locations indicate an SDWAN tunnel failure disrupting the network.
- AI Summary:** Multiple alerts in multiple locations indicate an SDWAN tunnel failure disrupting the network between main office and remote branches.
- Root Cause Analysis:** The SDWAN tunnel's instability, characterized by frequent flapping, caused configuration sync failures between edge routers and then a tunnel down status on the routers.
- Suggested Remediation:**
 - Investigate recent history of SDWAN tunnel latency and packet loss.
 - Review recent configuration changes on SDWAN devices.
 - Verify SDWAN device health and resource utilization.
 - Restart or reset the SDWAN tunnel if necessary.

At the bottom, there is a table of incidents:

Incident ID	Severity	Source	Status	Details
054536178	Incident	active	ID: UMD010987 SDWAN Tunnel flapping and outage	
054536199	Incident	active	ID: UMD010987 SDWAN Tunnel flapping and outage	
054536498	Incident	active	ID: UMD010987 SDWAN Tunnel flapping and outage	
054536481	Incident	active	ID: UMD010987 SDWAN Tunnel flapping and outage	
054536455	Incident	active	ID: UMD010987 SDWAN Tunnel flapping and outage

Critical Incident: SDWAN tunnel flapping and outage impacting business services

AI Analysis

Summary:

Multiple alerts indicate an SDWAN tunnel between the main office and remote branch is flapping, causing configuration sync failures and high CPU utilization on the SDWAN controller. The tunnel eventually went down, disrupting critical business services such as the trading platform, voice communications, and application access. Impacted services are experiencing unavailability, high packet loss, and increased response times.

Root Cause Analysis:

The SDWAN tunnel's instability, characterized by frequent flapping and eventual failure, appears to be the root cause of the service disruptions and performance degradation.

Suggested Remediation Actions:

1. Investigate recent history of SDWAN tunnel latency and packet loss for when problems began.
2. Review recent configuration changes on SDWAN devices.
3. Verify SDWAN device health and resource utilization.
4. Restart or reset the SDWAN tunnel if necessary.
5. Consider implementing configuration change management processes.
6. Update monitoring thresholds for proactive detection of tunnel flapping.

Value Framework Selling with LogicMonitor

What are the Value Drivers?

- **Maximize Efficiency and Productivity**
 - Technology Complexity & Business Misalignment
 - High Cost & Complexity of Monitoring Tools
 - Lack of Hybrid Visibility & Reactive Incident Response
- **Reduce Risk and Ensure Resiliency**
 - Blindsided by Outages & Lack of Visibility
 - Operational & Compliance Risks
 - Financial & Business Risk
- **Accelerate Innovation and Business Growth**
 - Competitive Pressure & Market Positioning
 - AI & Digital Transformation Uncertainty

LogicMonitor

- ✓ **SaaS-first simplicity** – deploys in hours, no heavy infrastructure required.
- ✓ **Unified observability** – one platform for networks, cloud, and apps.
- ✓ **Edwin AI intelligence** – proactive detection, forecasting, and insights that drive action.
- ✓ **Transparent pricing** – TermScout-certified, with flexible Hybrid Unit licensing.
- ✓ **Effortless scalability** – auto-discovers and monitors any hybrid or multi-cloud environment.
- ✓ **Proven security** – enterprise-grade protection backed by ISO 27001 and SOC 2 compliance.

SolarWinds

- ✗ **Cumbersome, resource-heavy setup** – multi-server installs, databases, and manual tuning.
- ✗ **Fragmented toolset** – siloed modules (NPM, SAM, NCM) with separate upkeep.
- ✗ **Basic, isolated AI** – manual enablement, limited automation.
- ✗ **Unpredictable pricing** – unclear overage fees and add-on costs.
- ✗ **Scales poorly** – needs extra pollers, databases, and hardware beyond ~20K devices
- ✗ **Security scars remain** – SUNBURST breach legacy fuels lingering trust concerns.

Objective

- Deliver high-quality, innovative dressings and sauces at national scale while preserving brand trust.

Strategies

Expand market share across retail grocery and foodservice channels nationwide.

Innovate products aligned to evolving consumer taste and health preferences.

Scale manufacturing and distribution efficiently to meet growing demand.

Maintain strong quality, safety, and operational excellence standards.

Initiatives

- Operate and modernize multiple U.S. manufacturing facilities to increase capacity.
- Launch new product formulations, including clean-label and specialty offerings.
- Optimize supply chain and distribution for retail, foodservice, and bulk customers.
- Integrate acquired brands into shared manufacturing and IT platforms.

Initiatives

Challenges

Limited real-time visibility across manufacturing, logistics, and IT systems.

Risk of downtime impacting production schedules and order fulfillment.

Ensuring food safety, quality, and compliance at scale.

Supporting automation and digital systems across distributed facilities.

Required Capabilities

- Unified monitoring of manufacturing, infrastructure, and application performance.
- Proactive detection of system issues before impacting production or quality.
- Centralized visibility across plants, data centers, cloud, and OT environments.
- Scalable observability platform supporting growth and acquisitions.

How LogicMonitor Solves

- Provides single-pane visibility across IT, cloud, and manufacturing infrastructure.
- Identifies performance issues early to prevent production and supply disruptions.
- Supports hybrid and distributed environments common in modern food manufacturing.
- Enables data-driven operational decisions that reduce downtime and operational risk.
